Porcelain pin post insulator has the advantage of pin insulator and line post insulator.

Ceramic pin post insulator can be used on the high contamination areas and seaside areas through increase the creepage distance and protected creepage distance.

The voltage pin post insulator is from 10 to 36KV.

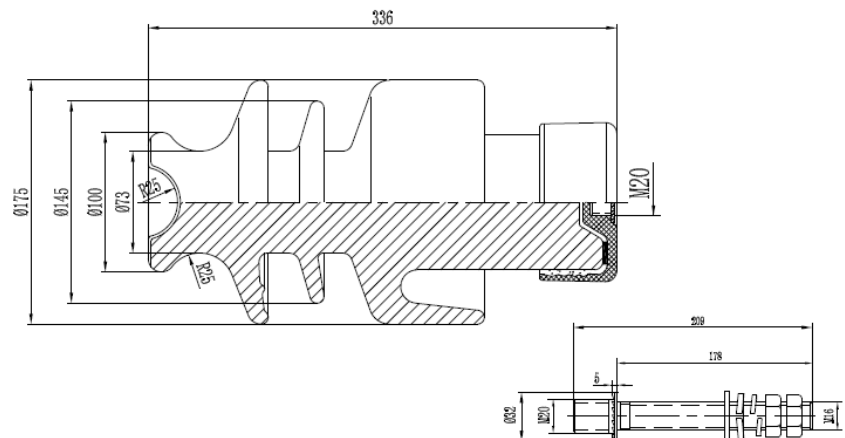

And the mechanical strength is above 12.5KN.

Specification of porcelain pin post insulator:

There is one type of porcelain pin post insulator is widely used in South Asian countries, the creepage distance is 520mm, and protected creepage distance is 260mm, cantilever strength 12.5KN.

Other pin post insulator type which voltage up to 72.5kv is widely used in the South American countries.

One of drawing for pin post insulator:

Technique request:

Commonly color of porcelain pin post insulator:

Brown, gray, grey
